

Troubleshooting Guide

(You may print out the entire section for your easy reference)

This modem is set to V.90, but why am I getting slow connections to my ISP ?

The majority of telephone lines and ISPs are already supporting V.90 connections. However, like all data connection, the connection is sensitive to the amount of noise present in the phone line. Hence, only very “clean” phone line can get high connection rate or throughput. You may want to check with your telephone provider.

The modem hangs up when an incoming call is received.

Disable the Call Waiting function for the Online Service, Internet Connection and/or communications software you are using.

When I tried to dial out, the system gave me an error message “No Dial Tone”.

Check your Telephone Cable connection. If necessary, plug out the Telephone Cable and reconnect the cable.

To check if it is due to a faulty telephone extension cable that you are using, connect the cable to a Telephone set. Listen to the handset dial-tone. If there is no dial-tone, there is most probably some problem with your telephone extension cable.

I have done a diagnostics test of my modem and there is nothing wrong with it. However, when I use a communications software, there seems to be an error. Why?

Try to use a different telephony application like **Microsoft Fax** to fax a document. If the sending of a fax is successful, then the fax function of your modem is working fine.

Try to use **Hyperterminal** to dial up to a BBS. If the connection is successful, then the data function of your modem is working fine.

Try exiting the communications software and running it again.

I cannot install the Modem under Windows® 95.

USB Modem is not supported in Windows® 95.

My system does not detect the modem when I boot up for the first time.

Make sure that your modem is connected to one of the USB port available in your system via the USB Cable. Ensure also that the USB Port and Plug-and-Play are enabled in your BIOS settings. If you are sure that your modem is properly installed, do the following:

For Windows 98 Second Edition / Windows Me:

- i. From the Windows taskbar, click **Start > Settings > Control Panel**.
- ii. Double-click the **System** icon. Click the **Device Manager** tab.
- iii. Check if there is any yellow exclamation mark (error) on the modem devices. If yes, remove the devices (right-click on SmartUSB56 Modem and click **Remove**) and restart your system to reinstall the modem drivers.

For Windows 2000 / Windows XP:

- i. Windows 2000: From the Windows desktop, right-click on **My Computer** icon. Select **Properties**.
Windows XP: From the Windows desktop, click **Start**. Right-click on **My Computer** and select **Properties**.
- ii. From System Properties dialog box, select **Hardware** tab and click **Device Manager** button.
- iii. Check if there is any yellow exclamation mark (error) on the modem devices. If yes, remove the devices (right-click on SmartUSB56 Modem and click **Uninstall**) and restart your system to reinstall the modem drivers.

While testing the modem, the system gave an error message stating that it was unable to open the COM Port.

Make sure that you have closed all communication software (e.g. Hyperterminal, Dial-up Networking, etc.) when you are doing the diagnostics test.

However, if there is no communications software running, do the following:

For Windows 98 Second Edition / Windows Me:

- i. From the Windows taskbar, click **Start > Settings > Control Panel**.
- ii. Double-click the **System** icon. Click the **Device Manager** tab.
- iii. Check if there is any yellow exclamation mark (error) on the modem devices. If yes, remove the devices (right-click on SmartUSB56 Modem and click **Remove**) and restart your system to reinstall the modem drivers.

For Windows 2000 / Windows XP:

- i. Windows 2000: From the Windows desktop, right-click on **My Computer** icon. Select **Properties**.
Windows XP: From the Windows desktop, click **Start**. Right-click on **My Computer** and select **Properties**.
- ii. From System Properties dialog box, select **Hardware** tab and click **Device Manager**.
- iii. Check if there is any yellow exclamation mark (error) on the modem devices. If yes, remove the devices (right-click on SmartUSB56 Modem and click Uninstall) and restart your system to reinstall the modem driver.

I have installed the modem successfully, but whenever I tried to call my ISP, the browser reports an error.

Make sure that you have installed TCP/IP.

For Windows 98 Second Edition / Windows Me:

- i. From the Windows taskbar, click **Start > Settings > Control Panel**.
- ii. Double-click the **Network** icon. If TCP/IP is not listed, it means that you have not installed TCP/IP.
- iii. Proceed to click **Add > Protocol > Add > Microsoft > TCP/IP**. Click **OK**.
- iv. Restart your system when prompted and reconfigure your Dial-Up Networking to connect to your ISP again.

Also check that you have stated the correct proxy (if any) of your ISP in the Browser options.

For Windows 2000 / Windows XP:

- i. Windows 2000: From the Windows taskbar, click **Start > Settings > Control Panel**.
Windows XP: From the Windows taskbar, click **Start > Control Panel**.
- ii. Double-click the **Network and Dial-Up Connections** icon. Right-click on your connection icon and select **Properties**. If TCP/IP is not listed, it means that you have not installed TCP/IP.
- iii. Proceed to click **Install > Protocol > Add > Internet Protocol**. Click **OK**, followed by Close.
- iv. Restart your system when prompted and reconfigure your Dial-Up Networking to connect to your ISP again.

Also check that you have stated the correct proxy (if any) of your ISP in the Browser options.
