

NetRider™ Client for Macintosh Quick Start

This card explains how to quickly install and configure NetRider Client for Macintosh for the first time. You need the following items to install this product:

- 4 megabytes of Random Access Memory (RAM).
- A minimum of 1 MB of free disk space on the system disk.
- Macintosh System 7.1 software (or higher).
- A Hayes-compatible modem, 9600 baud minimum, and modem cable.
- NetRider installation disks.

For more detailed information, see *NetRider Client for Macintosh Installation and Use*.

Part Number: AV-QMEJA-TE

NetRider Client for Macintosh V1.1 November, 1995

Begin Installation

2

- ☐ 1) Do one of the following:
 - a) If installing from diskette, insert **Installation Disk 1** in drive and double-click the **NetRider Client for Mac** diskette icon.
 - b) If installing from a file server, double-click the **NetRider Client for Mac** folder icon.
- ☐ 2) Double-click the **NetRider Client for Mac v1.1 Installer** icon.
- ☐ 3) Click **Continue**.
- ☐ 4) Read the release notes and, if desired, save and/or print them by clicking **Save...** and/or **Print...**
- ☐ 5) Click **Continue**.
- ☐ 6) Do one of the following:
 - a) Click **Install** to perform a standard install.
 - b) Click **Custom** to perform a custom install and go to Step 10.
- ☐ 7) Click **Yes**.
- ☐ 8) Specify the folder into which you want to install your software and click **Install**.
- ☐ 9) Click **Restart**. You are done with this part of the installation. Go to Part 3.
- ☐ 10) Select the component you want to install by clicking on the item. To select more than one component, hold down the **Command** key while clicking.
- ☐ 11) Click **Install** when finished.
- ☐ 12) Specify the folder into which you want to install your software and click **Install**.
- ☐ 13) Click **Quit** if you are finished. You may or may not need to restart your Macintosh depending upon which items you custom installed.
