Establishing a Password

- Turn on or restart the computer. If you are in Windows, click Start > Shut Down > Restart the computer.
- When the F10 Setup message appears in the lower-right corner of the screen, press the F10 key. Press Enter to bypass the title screen, if necessary. If you do not press F10 when prompted, a restart will be necessary.
- Select Password Option, then select Change Supervisor Password and follow the instructions on the screen. You may also want to establish the Password check at this time. This will allow you to specify when the password will be required.
- Before exiting, click Save Settings and Exit.

Changing a Password

- Turn on or restart the computer. If you are in Windows, click Start > Shut Down > Restart the Computer. To change the setup password, run Computer Setup.
- When the key icon appears, type your current password, a slash (/) or alternate de-limiter character, your new password, another slash (/) or alternate delimiter character, and your new password again as shown:

current password/new password/new password.

NOTE: Type the new password carefully since the actual characters do not appear on the screen.

- Press the enter key.
- The new password will take effect the next time the computer is restarted.

Deleting a Password

- Turn on or restart the computer. If you are in Windows, click Start > Shut Down > Restart the Computer. To delete the setup password, run Computer Setup (F10).
- When the key icon appears, type your current password followed by a slash (/) or alternate delimiter character as shown. Example: currentpassword/
- Press the Enter key.

Clearing CMOS

The computer's configuration (CMOS) may occasionally be corrupted. If it is, it is necessary to clear the CMOS memory using by performing the following procedure:

CAUTION: The power cord must be disconnected from the power source before changing the jumper setting. (NOTE: All LEDs on the board should be OFF). Failure to do so may damage the system board

- Turn off the computer and any external devices, then disconnect the power cord from the power outlet.
- Remove the access panel.
- Locate the JP3 CMOS jumper and move the jumper from pins 1-2 to pins 2-3. Keep the jumper there for 5 seconds.
- Replace the jumper on pins 1-2.
- Replace the access panel.
- Connect the power cord to the power outlet.
- Turn on the computer, allow it to start. Run the Computer Setup Utility to reconfigure the system.

NOTE: Clearing CMOS clears all passwords.
