**New NFS Gateway 1.2 causes GPEE on NetWare 3.12 (Last modified: 04JAN2000)**

This document (2955261) is provided subject to the disclaimer at the end of this document.

---

## Symptom

When right-clicking from within the Windows NT Explorer on a file, residing on a NFS Gateway Volume, while the application Corel Versions is installed on the workstation, the NFS Gateway version 1.2 causes a General Processor Exception Error on a NetWare 3.12 server.

Steps to duplicate:

- 1) Set up a UNIX server and export a file system or directory.
  - 2) Set up the NetWare NFS Gateway version 1.2 and mount the exported UNIX file system.
  - 3) Set up a Windows NT workstation and install the latest NetWare Client for Windows NT.
  - 4) Install CorelDraw version 8 with the optional software Corel Versions on the NT workstation.
  - 5) Launch the Windows NT Explorer, double-click the icon representing the NetWare 3.12 server that runs the NFS Gateway. Then double-click the icon representing the NFS Gateway Volume, select a file and right-click on the selected file.
- 

## Solution

Fixed with NetWare 5 NFS Services version 2.4
