

Netfinity ESCON Adapter

Options

by

IBM

Today's Discussion

- Market Dynamics
- The Technology
- Customer Solutions
- Future Directions

Overview

IBM Netfinity

Gateway/Application Server
– CS/NT, SNA Server
– SAP, Baan, PeopleSoft

ESCON Adapter

- Direct Channel Attachment
- Up to Two 200Mbps Connections
- SNA/Server Consolidation
- Efficient Client/Server Application Deployment (ERP, Business Intelligence)
- Transfer Blocks of 64,000 Bytes

IBM S/390

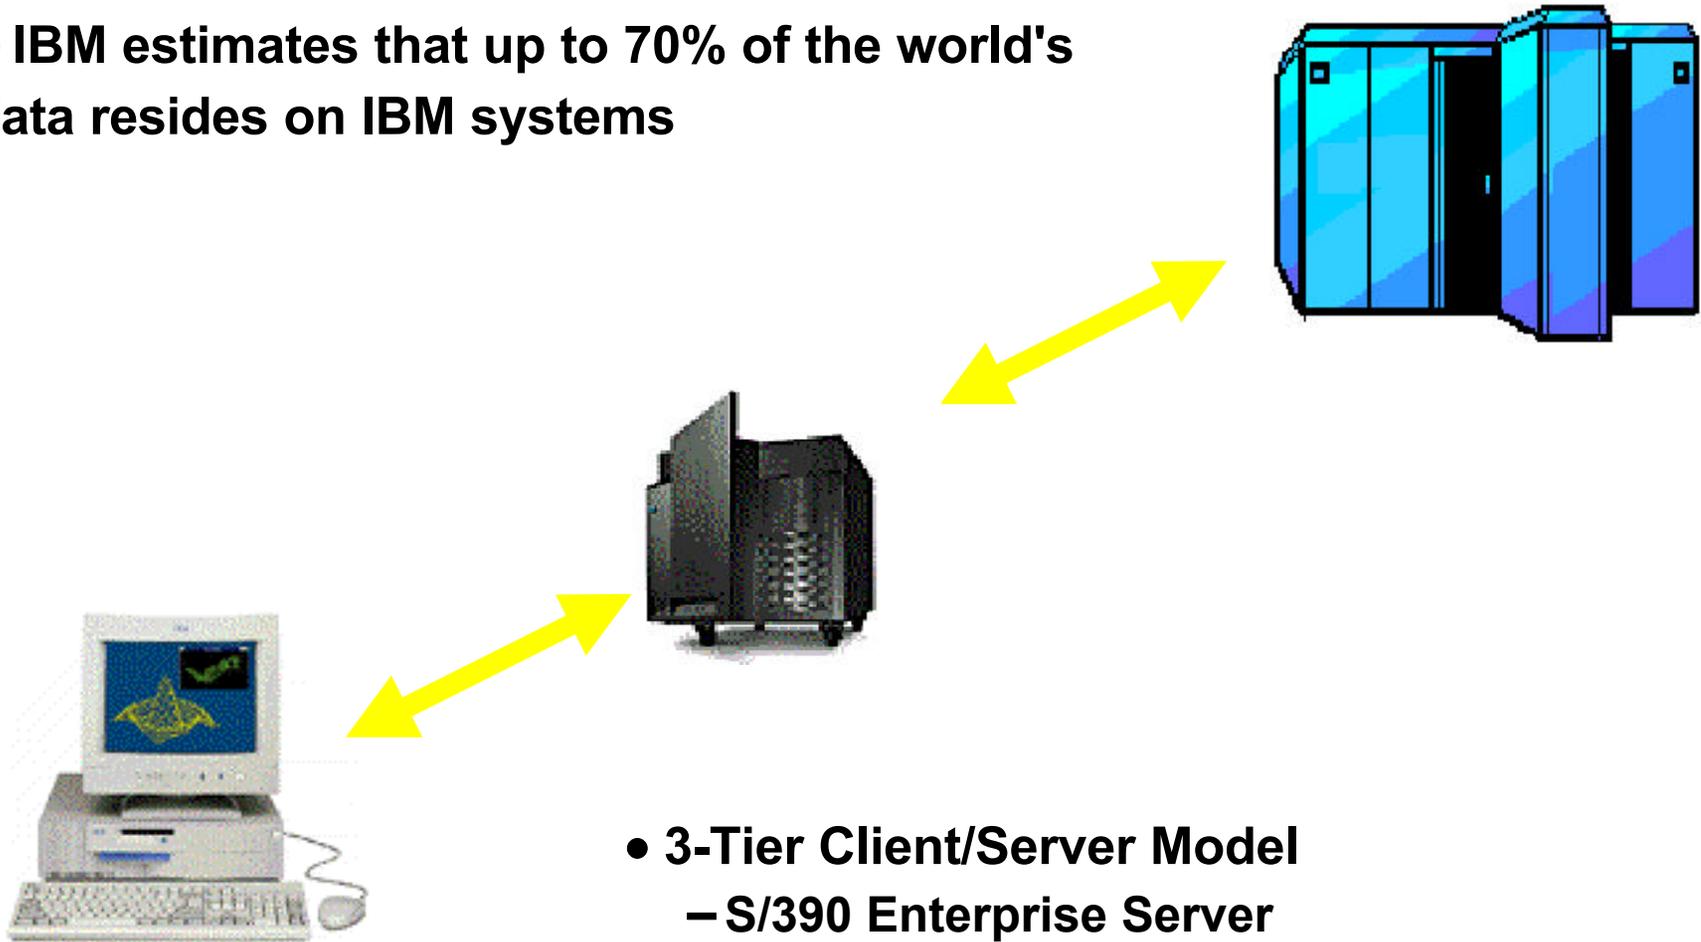

Application/Data Server
– CICS
– DB2, etc.

Market Dynamics

Enterprise Networks

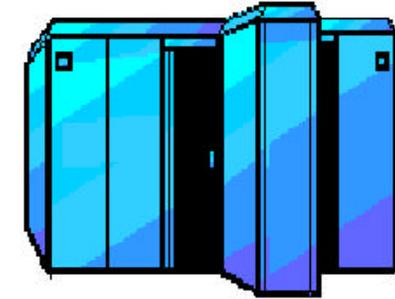

- IBM estimates that up to 70% of the world's data resides on IBM systems

- **3-Tier Client/Server Model**
 - S/390 Enterprise Server
 - UNIX or Windows NT Intermediate Server
 - Windows or browser-based Clients

Directions

- Deployment of new applications on Servers
- Access to legacy data and applications
- Web enabled

Data and Application Access

Microsoft BackOffice :

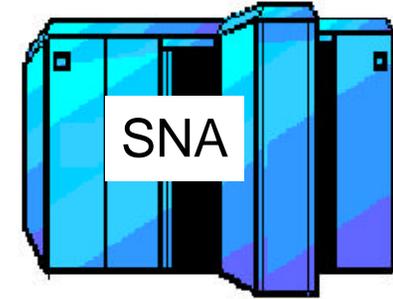

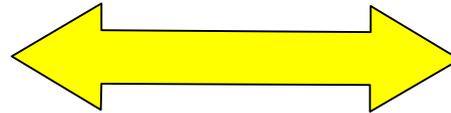

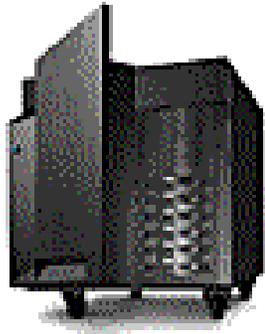

- SNA Server for Host Access

IBM Enterprise Host Access :

- CS/NT for Host Access
- Host Publisher
- Host On-Demand

Why IBM?

IBM Enterprise Host Access :

- Netfinity Server
- Netfinity ESCON Adapter
- Communications Server for NT
- Host On-Demand

Data and Application Access

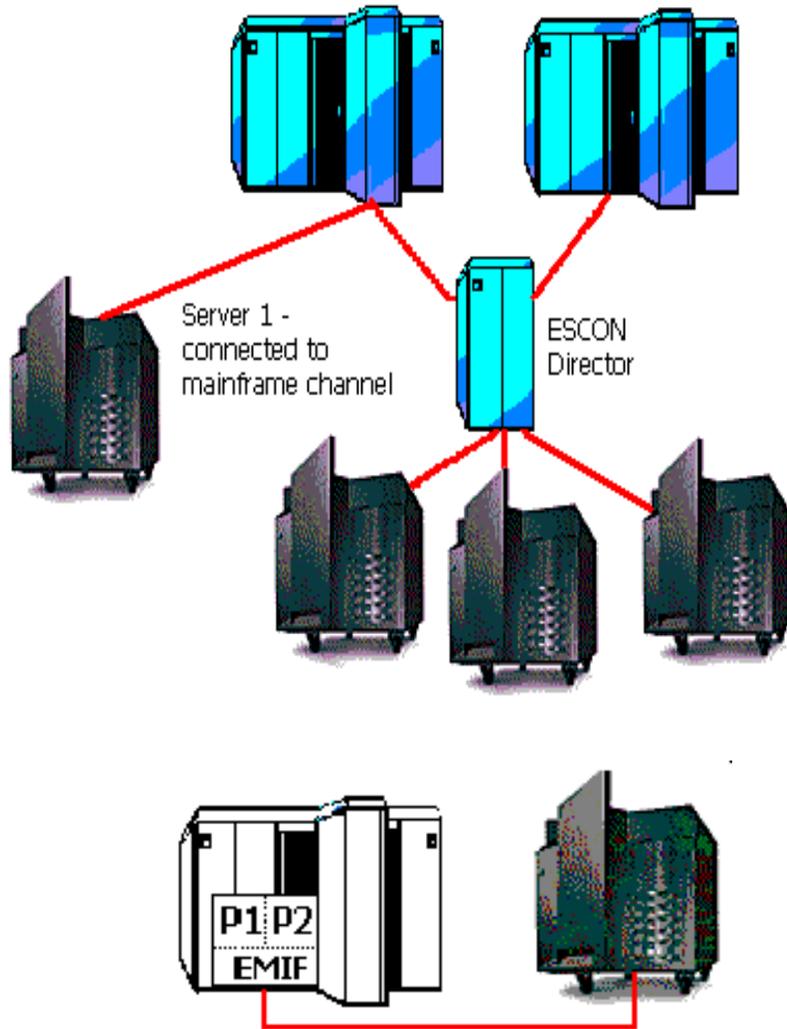

- *Complete, Integrated Solution*
- *Worldwide Support*
 - S/390, Netfinity, NT Software
- *Performance*
 - MPC

Netfinity

The Technology

What is ESCON?

ESCON - Enterprise System Connection

- Point-to-Point Dual Fiber Connection
- Speeds up to 17Mbps
- Connects controllers to mainframes

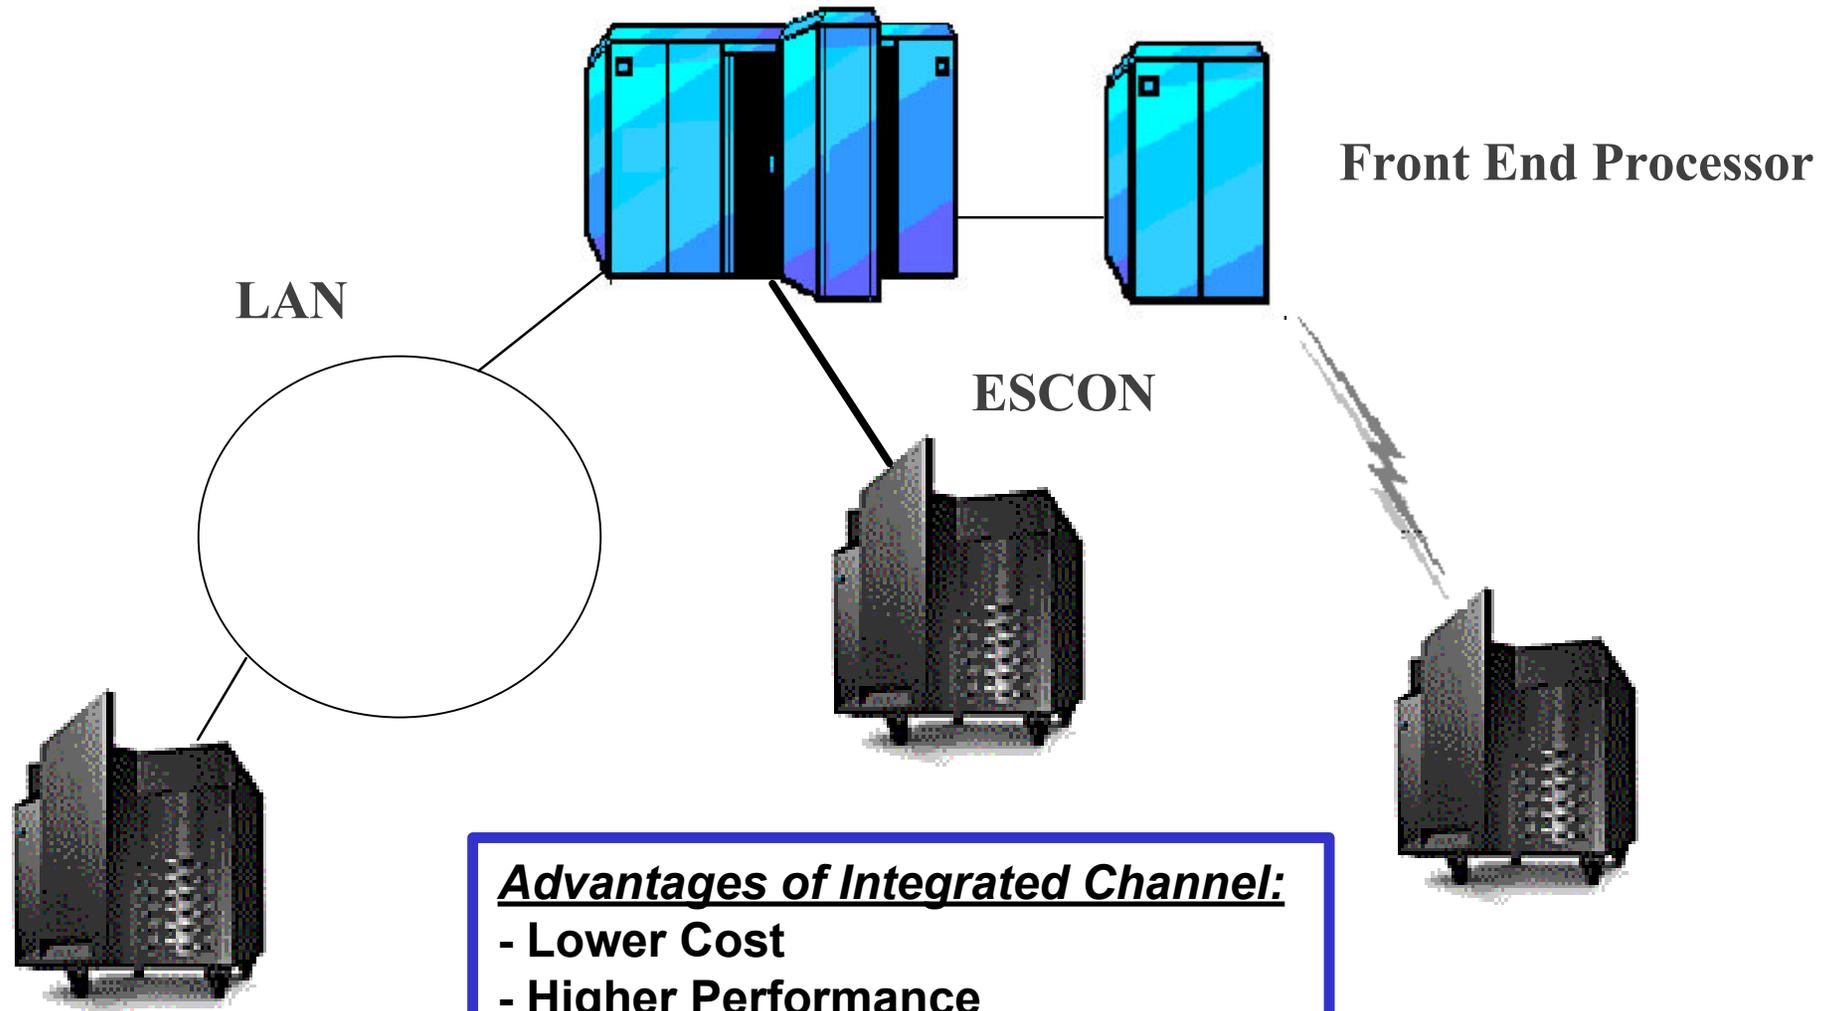

ESCON Director

- Multiple controllers to connect to 1 Channel
- A single controller to connect to multiple channels

ESCON Multiple Image Facility (EMIF)

- Allows single controller to connect to multiple Logical Partitions (System Images)

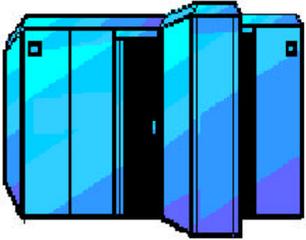

Why ESCON?

Advantages of Integrated Channel:

- Lower Cost
- Higher Performance
- Flexible environment

What need?

SNA
TCP/IP

**Windows NT, UNIX,
NetWare**

SNA, TCP/IP, IPX,
Netbios, etc.

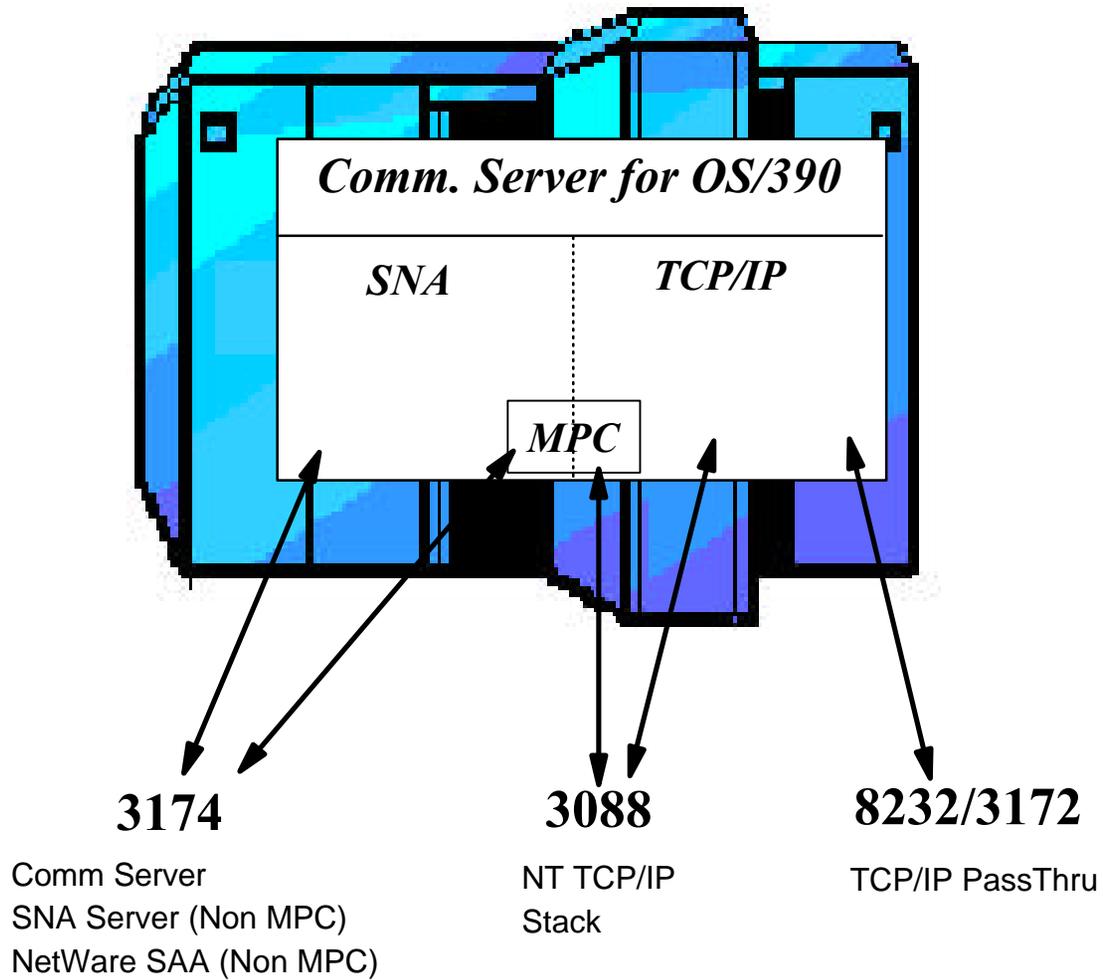

Windows 95/98
Windows NT, OS/2

1. **Clients need Access to Mainframe-based applications (CICS, TSO, etc.).**
2. **Clients need to pull down files from Mainframe.**
3. **Applications running on Clients need access to mainframe data.**
4. **Servers need to retrieve/store files on the mainframe.**
5. **Applications running on the Servers need to access / update data on the mainframe.**

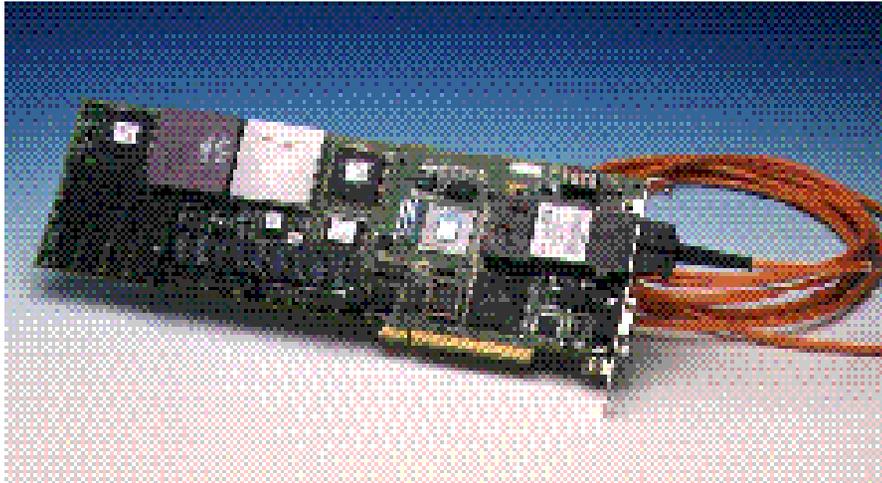

KEYS: TCP/IP and SNA

Netfinity

Mainframe Software

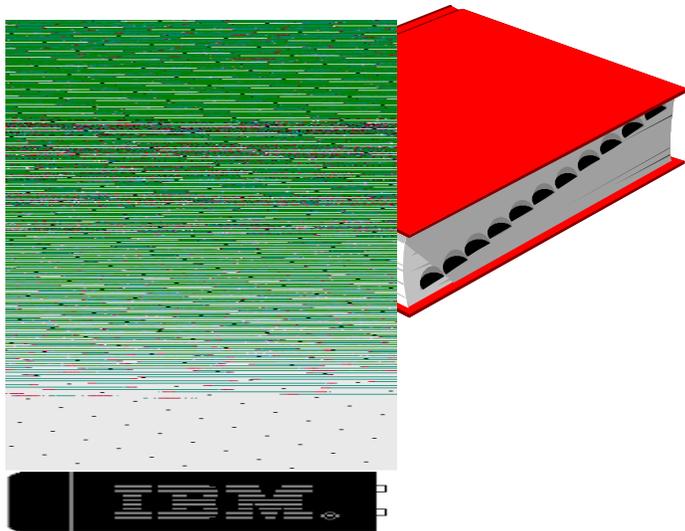

Netfinity ESCON Adapter

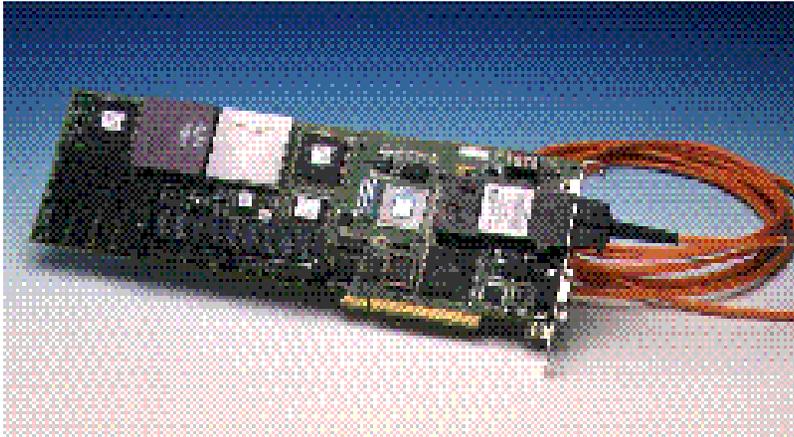

The Kit:

- PCI ESCON Adapter
- CD-ROM
- Installation Manual
- ESCON Wrap Plug

Netfinity

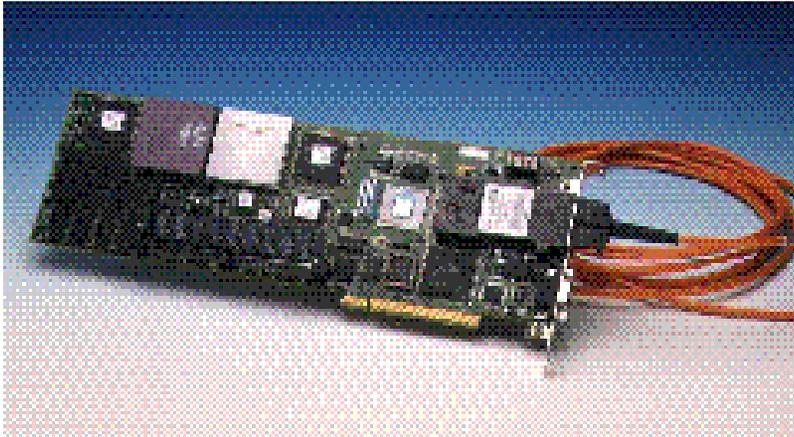

Netfinity ESCON Adapter

The Hardware:

- Single full-size PCI Card--requiring full-length slot
- Maximum 2 per System
- Analogous to a Network Interface Card
- Rear Connectors--ESCON MIC (1) and DB9 (1)
- Dual LED Status Display
- Connects directly to IBM ESCON Channel
- Supports channel speed up to 200Mbps
- No Board Jumpers and Switches
- Cable optional

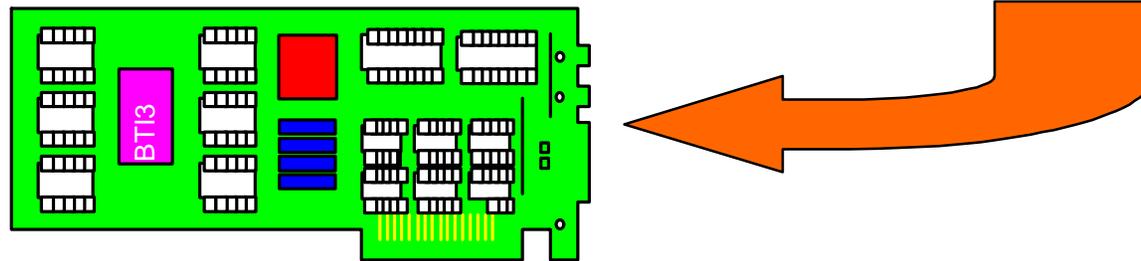

Netfinity ESCON Adapter

The Hardware:

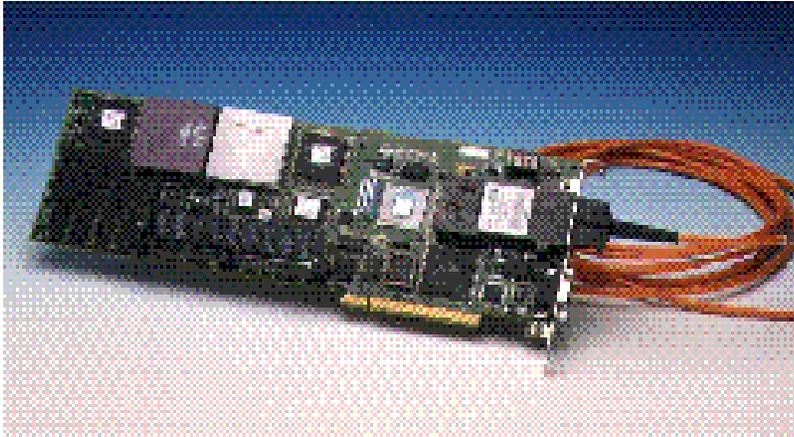

- Intel 80960CA RISC Processor--33MHz
- 1MB Static Memory--Control Storage
- 1MB Flash PROM
- RS232 Serial Port Controller (16550 UART)
- Programmable Timer (Intel 82C54)
- 4MB Buffer Memory
- 512KB Descriptor Memory
- PLX PCI Controller (PCI 9060)

Netfinity ESCON Adapter

- **Uses IBM's ESCON Enabler Technologies**
 - Full 200Mbps throughput
 - Complete ESCON protocol support
 - ESCON Multiple Image Facility (EMIF)
- **Compatibility with IBM's S/390 ESCON channels**

Netfinity ESCON Adapter

All Emulations Support

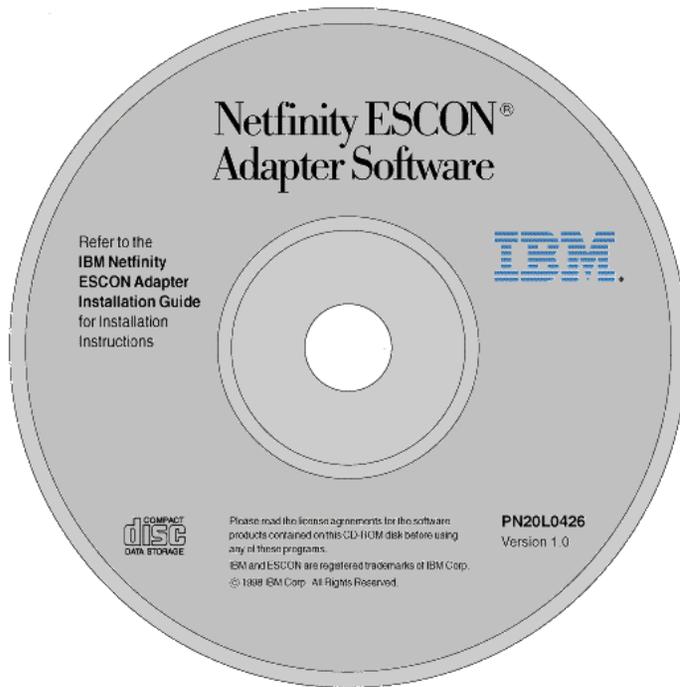

EMIF!

The Firmware:

At Startup the Intel 960 run Power On Self-Test (POST) and then loads the emulations

- **3174 Emulation**
Emulates IBM 3174 Local SNA Controller
Used for SNA connections to VTAM in mainframe
- **8232 Emulation**
Emulates IBM 8232 device
Used for TCP/IP Passthrough to IBM mainframe TCP/IP
- **3088 Emulation**
Emulates Subset of IBM 3088 device
Used with MPC and VPPA

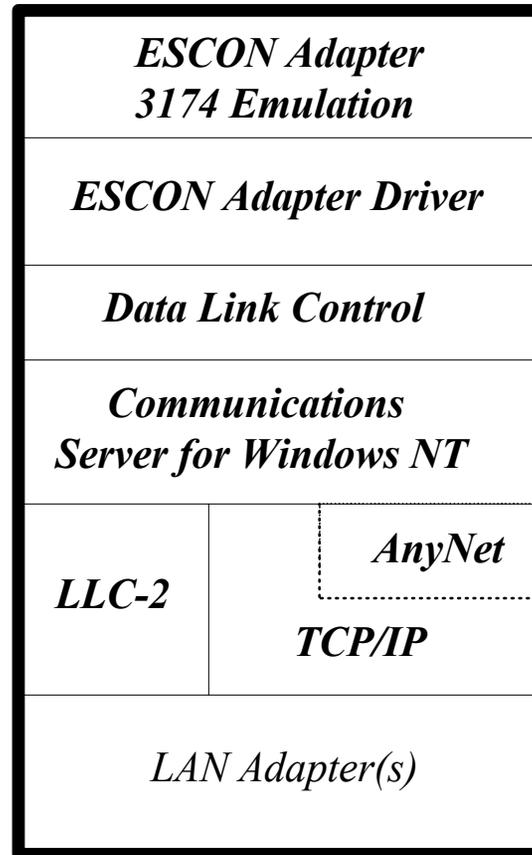

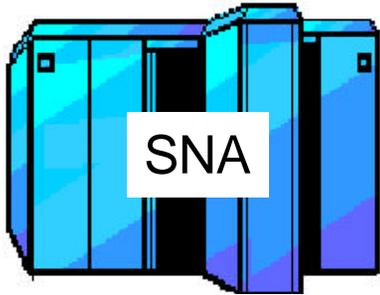

Netfinity ESCON Adapter

The CD-ROM:

- **Adapter Firmware and Firmware Utilities**
- **ESCON Adapter (Network) Driver**
- **Channel Driver for NetWare**
- **Data Link Control for Communications Server for Windows NT**
- **Data Link Service for Microsoft s SNA Server**
- **TCP/IP Passthrough for Windows NT**
- **TCP/IP Passthrough for NetWare**
- **MPC Driver for Windows NT**
- **Virtual Point-to-Point Adapter (VPPA) driver**

Comm. Server for Windows NT

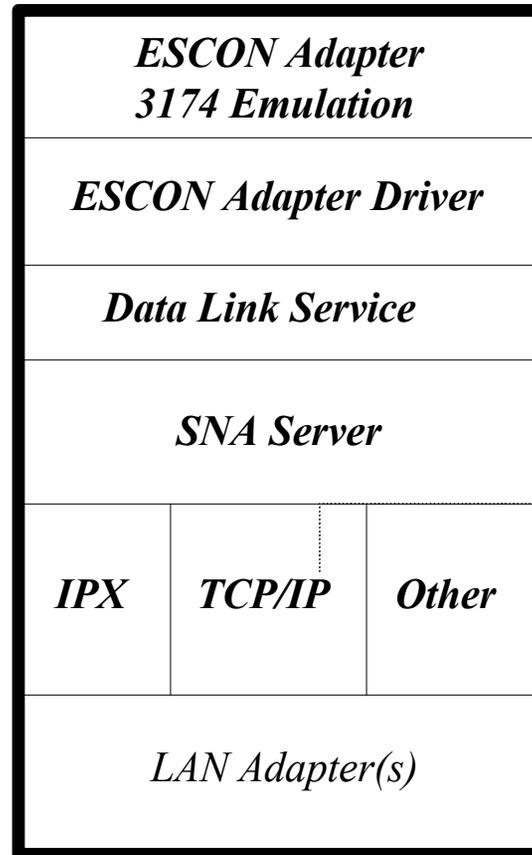

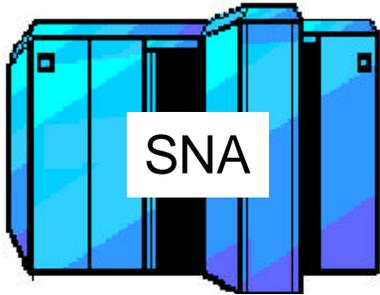

- Full APPN Network Node
- Supports AnyNet
- TN3270E Support
- for High-Performance Routing (HPR)

SNA, APPN,
TCP/IP, AnyNet

Netfinity

Microsoft's SNA Server

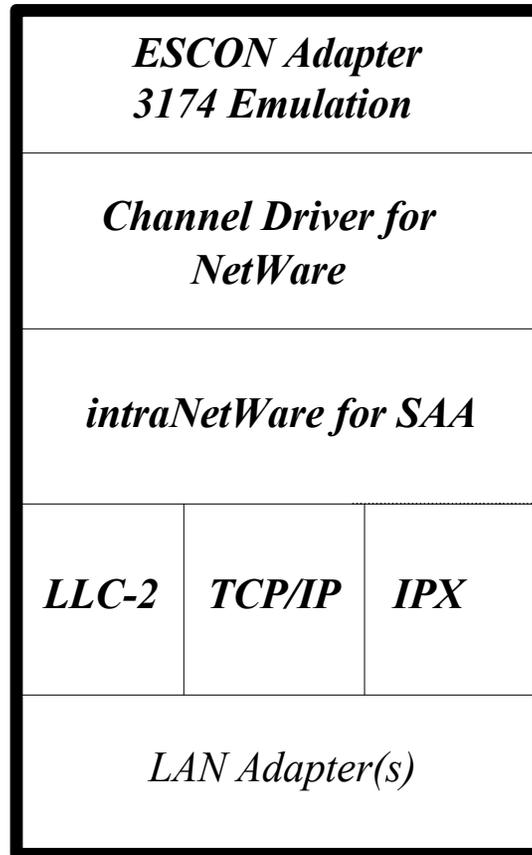

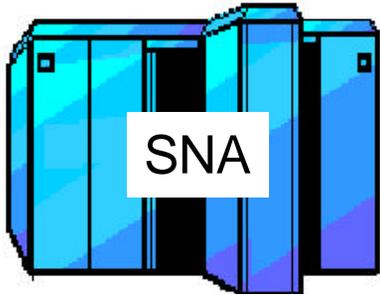

- PU 2.0 and PU2.1 Support
- TN3270E Support
- for LAN Clients (IPX, Netbios, Vines, etc.) running 3270 Emulation

SNA, TCP/IP,
IPX, Netbios,
and More

Netfinity

intraNetWare for SAA

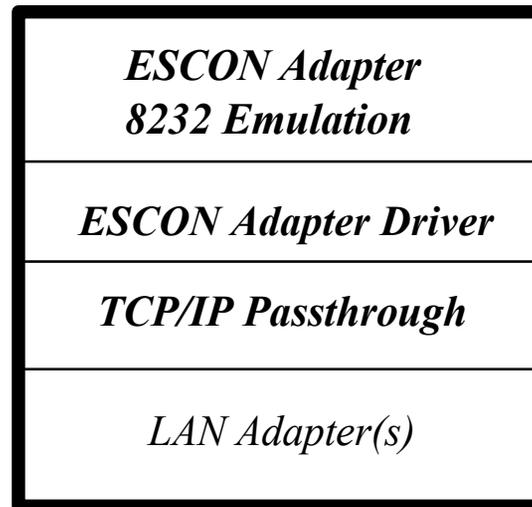

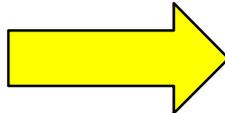

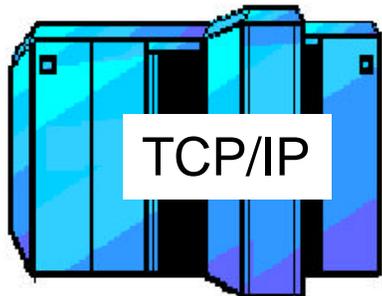

- Full APPN Network Node
- Support for IPX Clients
- TN3270E Support
- for High-Performance Routing (HPR)

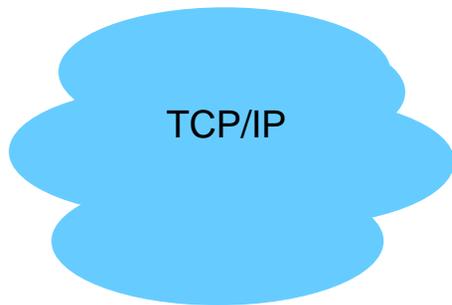

SNA, APPN,
TCP/IP, AnyNet

Netfinity

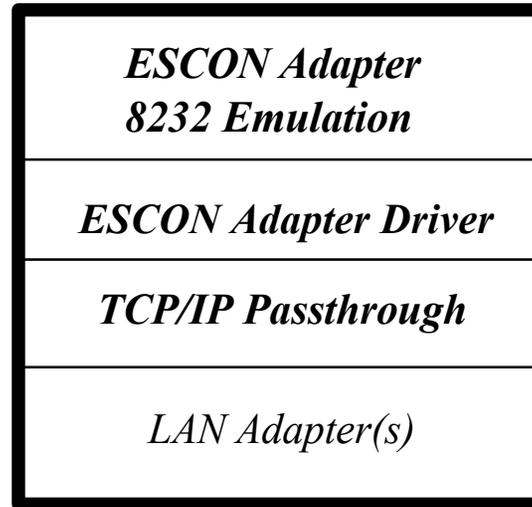

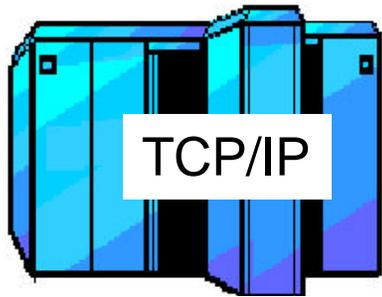

TCP/IP Passthrough for Windows NT

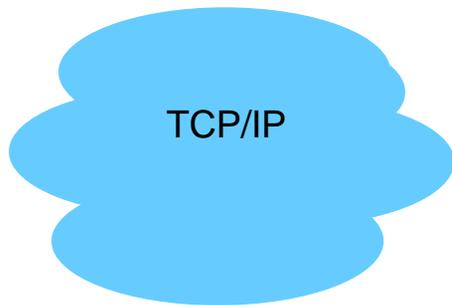

- Installs as a Windows NT Protocol
- High-Speed Pass Through of TCP/IP Packets
- IP Address Filtering
- Uses 2 Sub-Channels for High-Performance
- Supports Leading Mainframe TCP/IP Stacks

TCP/IP Passthrough for NetWare

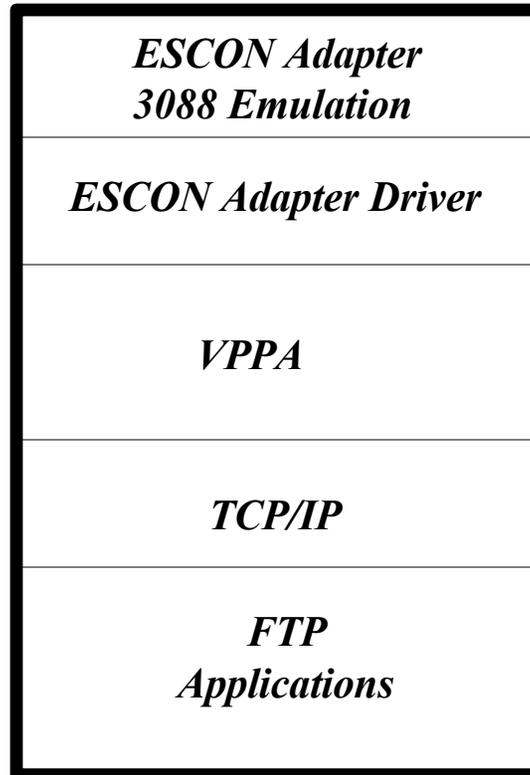

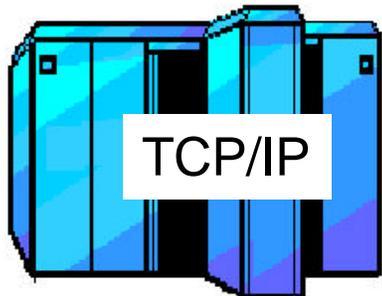

- High-Speed Pass Through of TCP/IP Packets
- Uses 2 Sub-Channels for High-Performance
- Supports Leading Mainframe TCP/IP Stacks

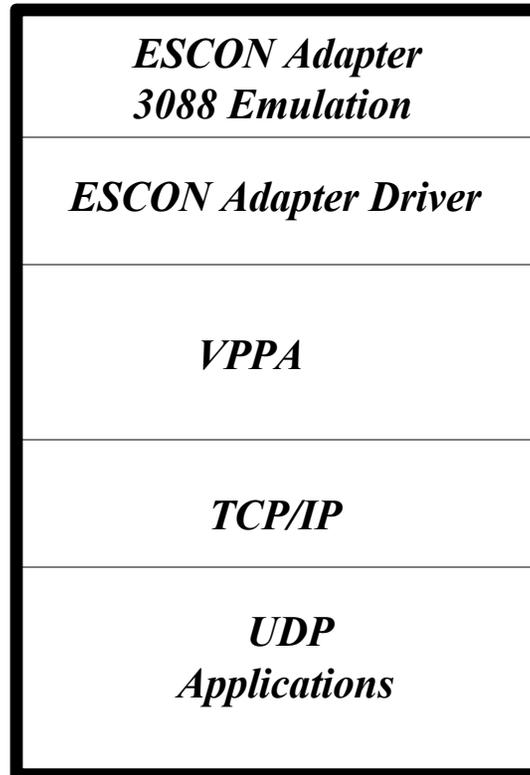

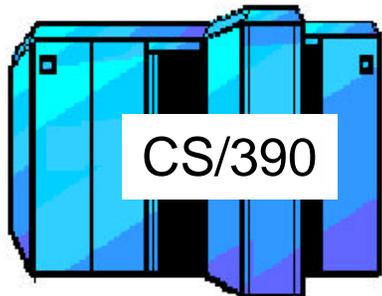

Netfinity

Virtual Point-to-Point Adapter

- NDIS Driver
- Point-to-Point TCP/IP connection between Mainframe TCP/IP stack and Windows NT TCP/IP
- FTP File Transfer from Mainframe to Server

High-Speed Access Services (MPC+)

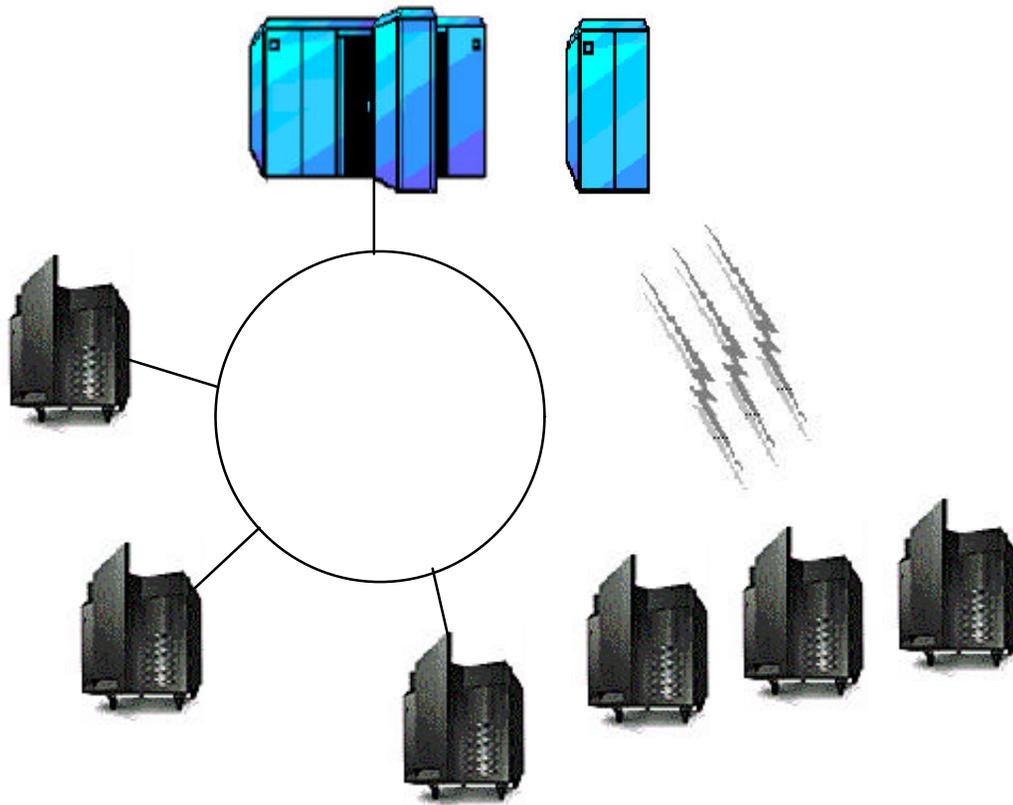

- MPC Reduces Mainframe CPU Cycles
- Uses HSAS on Comm. Server / 390
- IBM Strategic Channel Protocol
- Technology Licensed

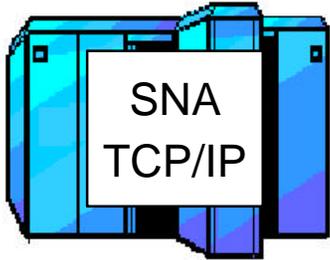

Customer Solutions

Server Consolidation

- S/390 Shop
- IP Backbone network
- Multiple remote gateways installed (OS/2 Comm. Server, MS SNA Server or NetWare for SAA)
- 500+ LAN-Attached PC Users
- Looking to implement browser-based 3270 access (home banking, on-line stock trading, etc.)

Server Consolidation

*SNA Gateway/
TCP/IP Passthrough*

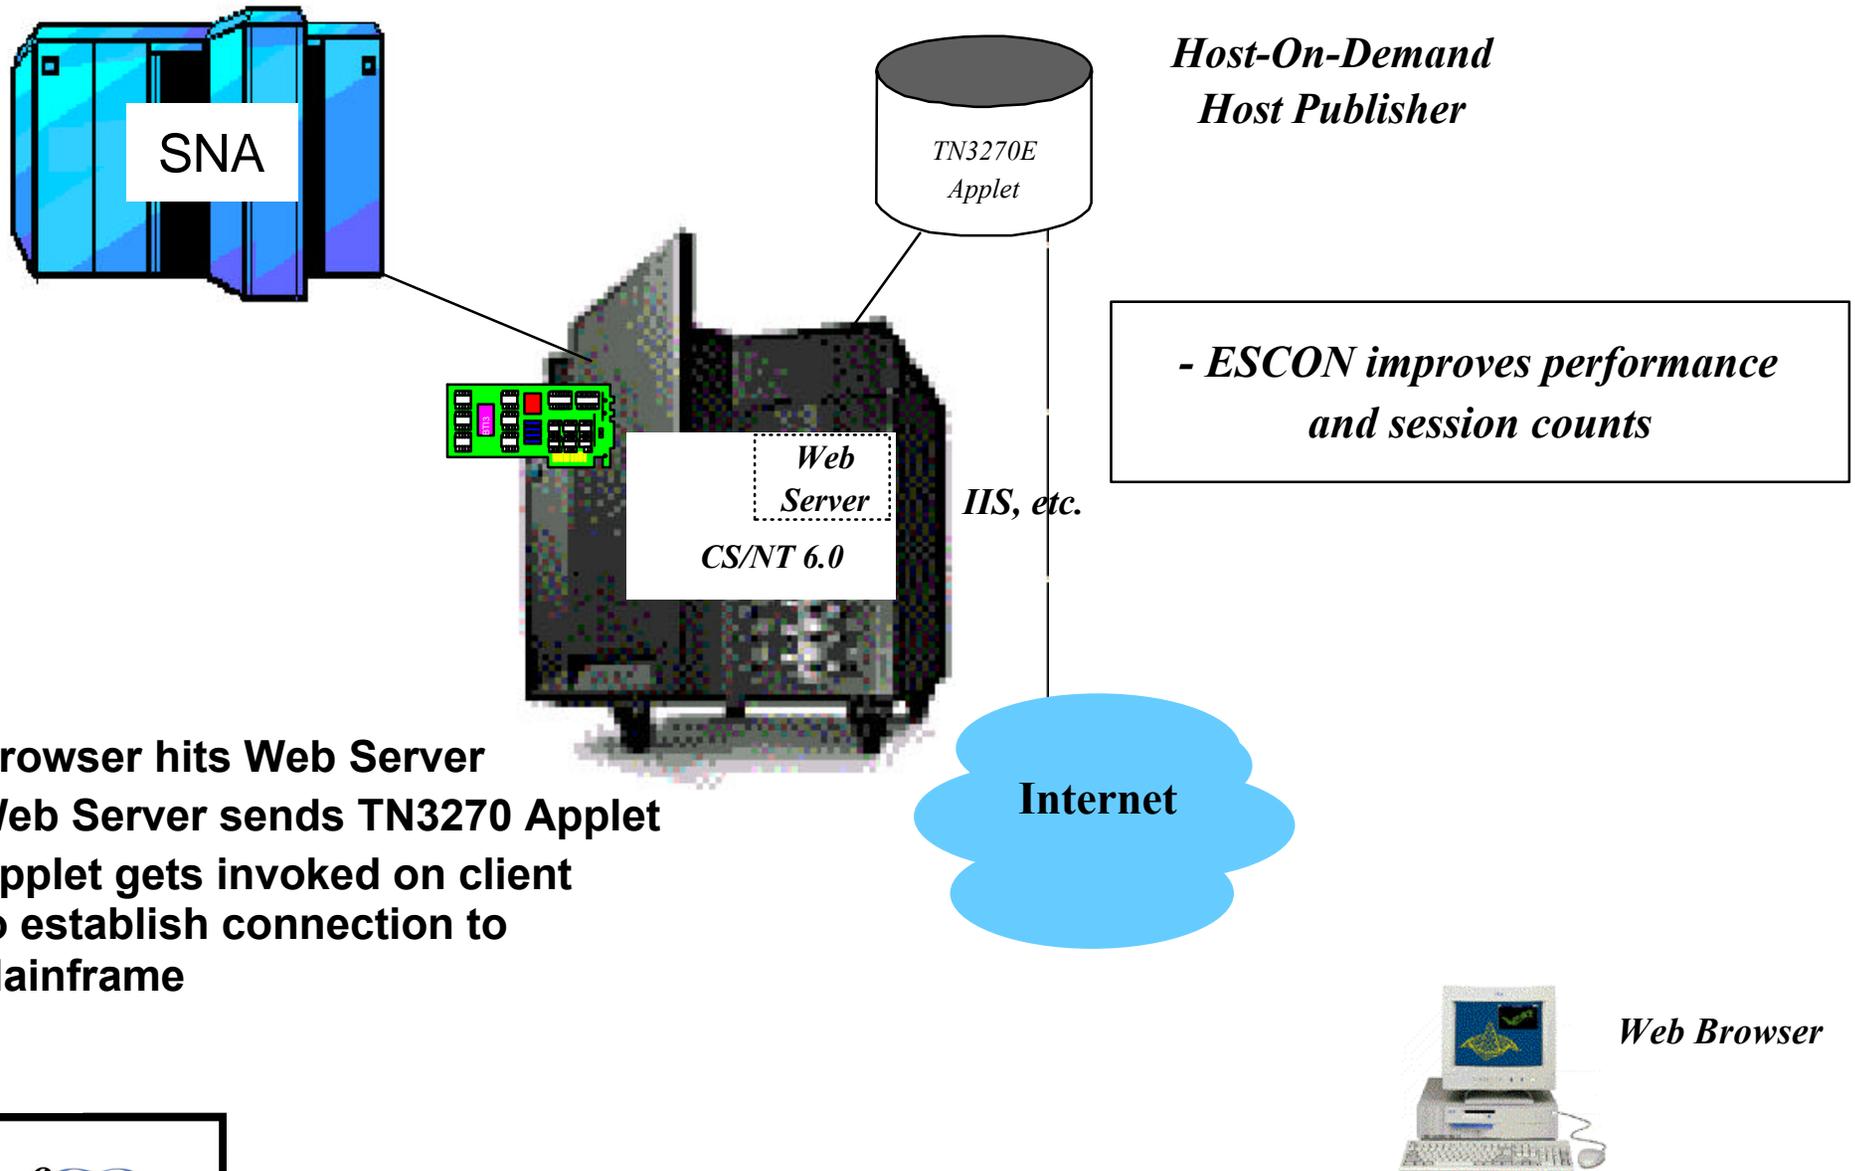

SNA, APPN,
TCP/IP, AnyNet

*3270 Emulators (PCOM)
TN3270
FTP, etc.
Web Browser*

- **Centralized management, service and control**
Simple to add new users and locations
Improved support for remote users
Unified network architecture
- **Eliminates the need for complex SNA gateway knowledge in field offices**
- **Centralized security and access control by IT professionals**
- **Improved server utilization**
Typical branch office gateways are running at 20% CPU utilization. A centralized gateway would typically run at 80% utilization

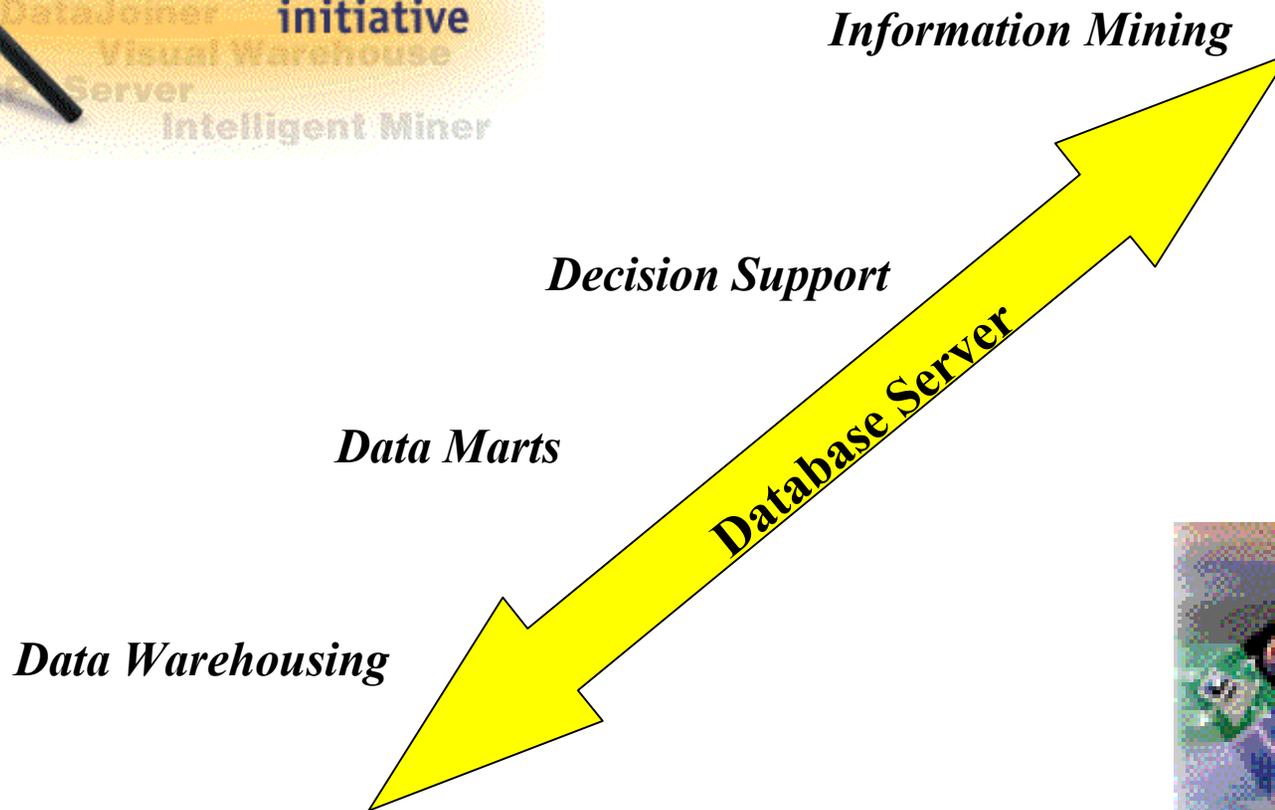

Web Access

- Browser hits Web Server
- Web Server sends TN3270 Applet
- Applet gets invoked on client to establish connection to Mainframe

Netfinity

Business Intelligence Solutions

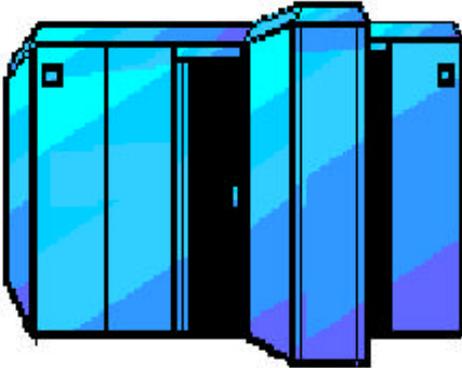

DB2 for OS/390

Netfinity

Data Management

Integrated Channel Solution

SNA or TCP/IP

Windows NT Server

SNA Communications

- IBM's Communications Server for NT
- Microsoft's SNA Server

TCP/IP Communications

- Windows NT TCP/IP Stack

Supported Solutions:

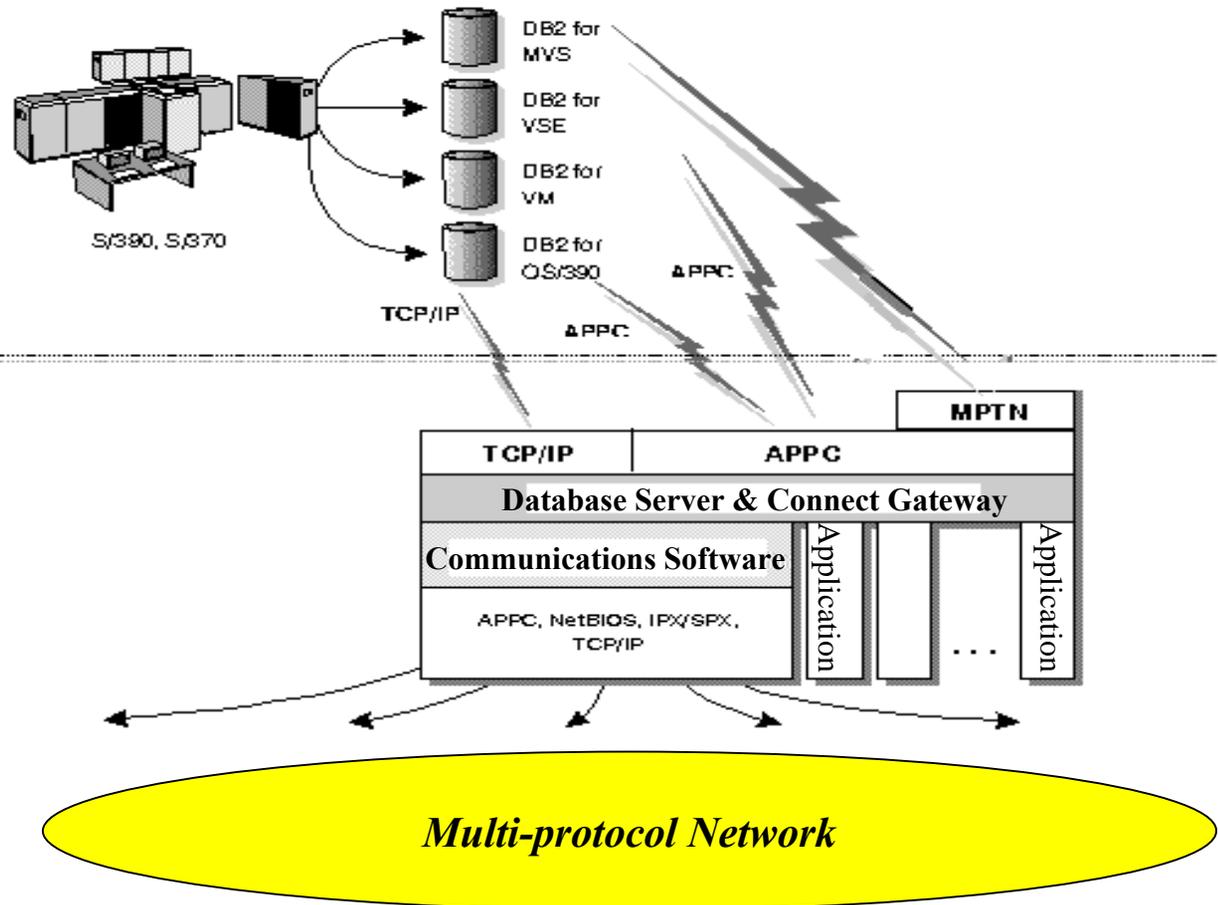

Advantages of Integrated Channel:

- Lower Cost
- Higher Performance
- Flexible environment

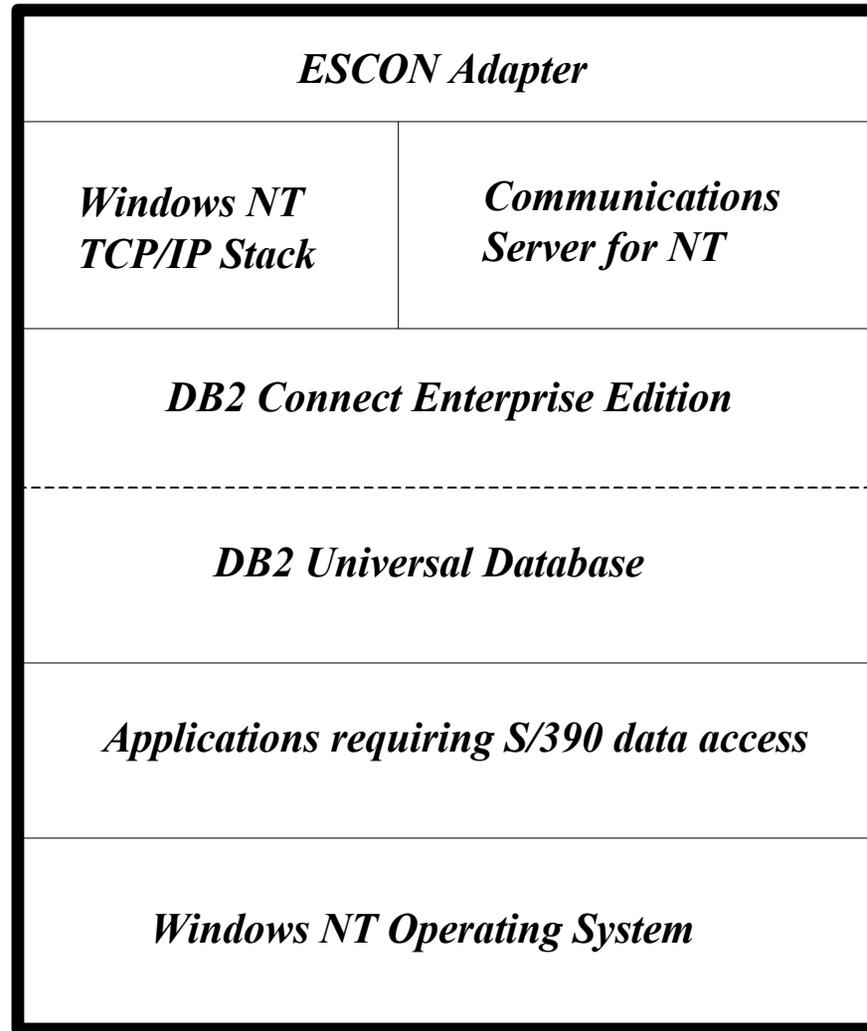

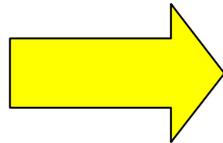

Netfinity

Data Management

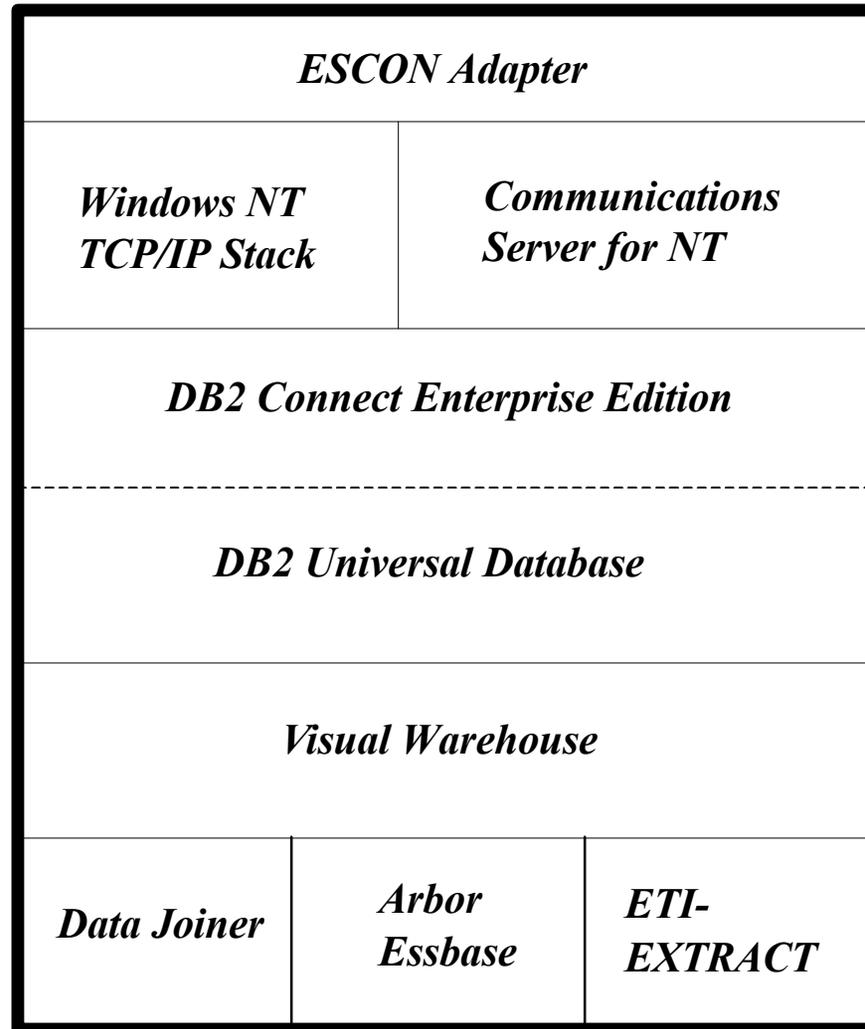

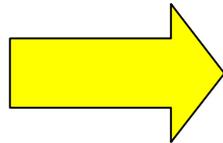

S/390 Legacy Data Access

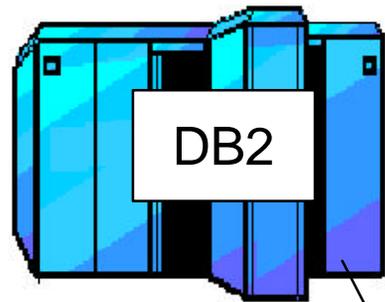

Data Management

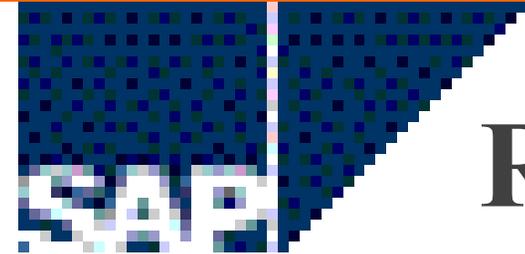

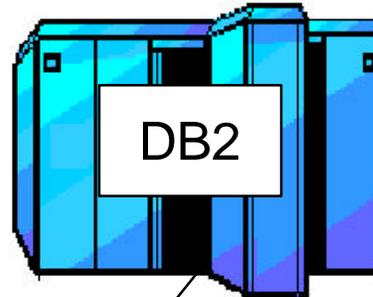

Data Warehousing / Data Marts

Enterprise Resource Planning

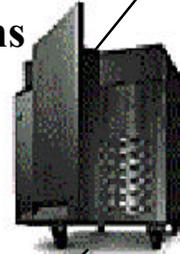

Database
Servers

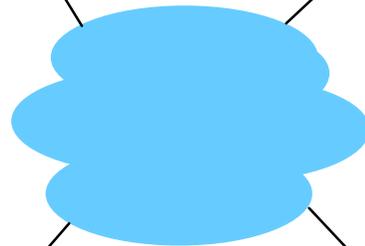

R/3

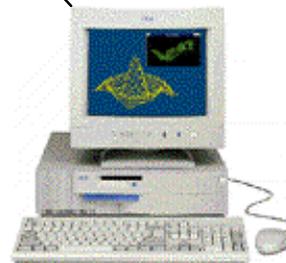

SAP R/3
Applications

Server running Windows NT

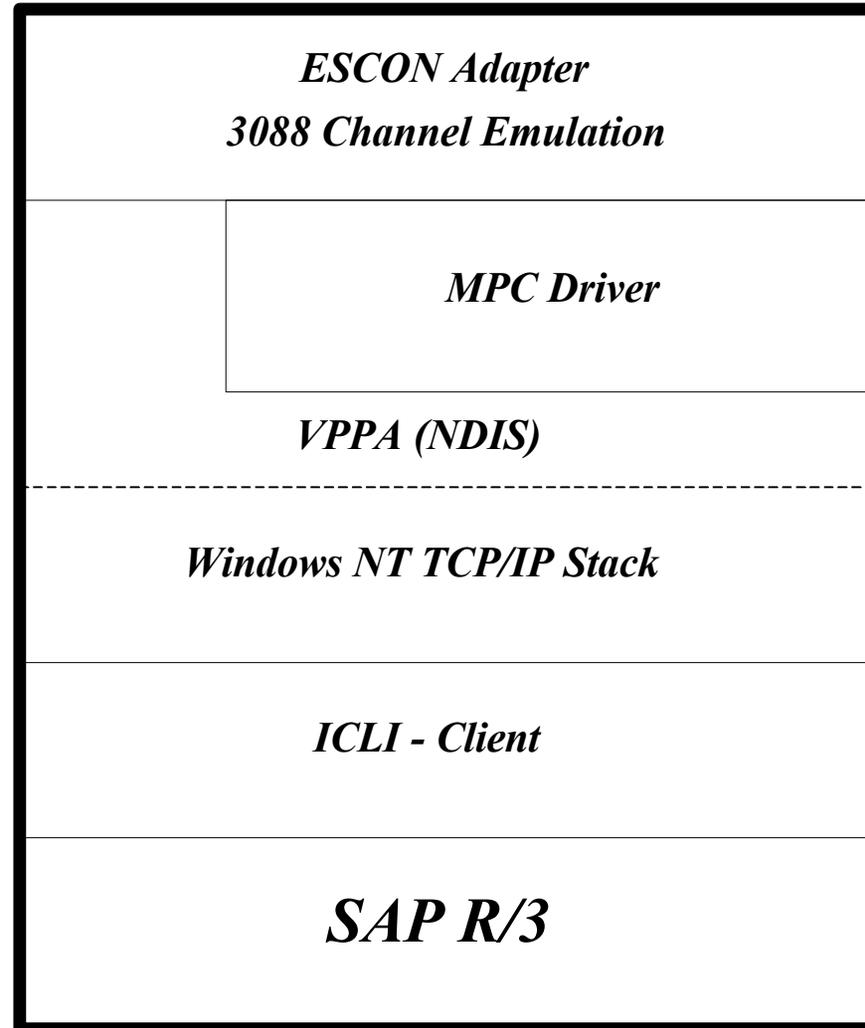

SAP
GUI

Netfinity

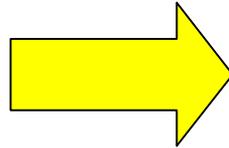

Enterprise Resource Planning

Backup & Restore

ADSM

ESCON Adapter

Windows NT TCP/IP Stack

DB2 Connect Enterprise Edition

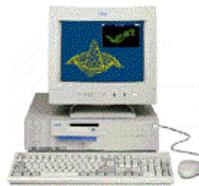

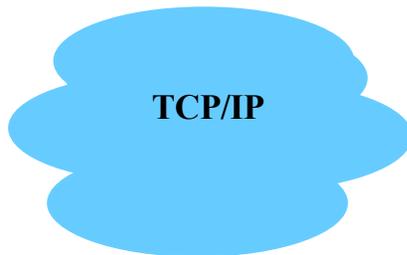

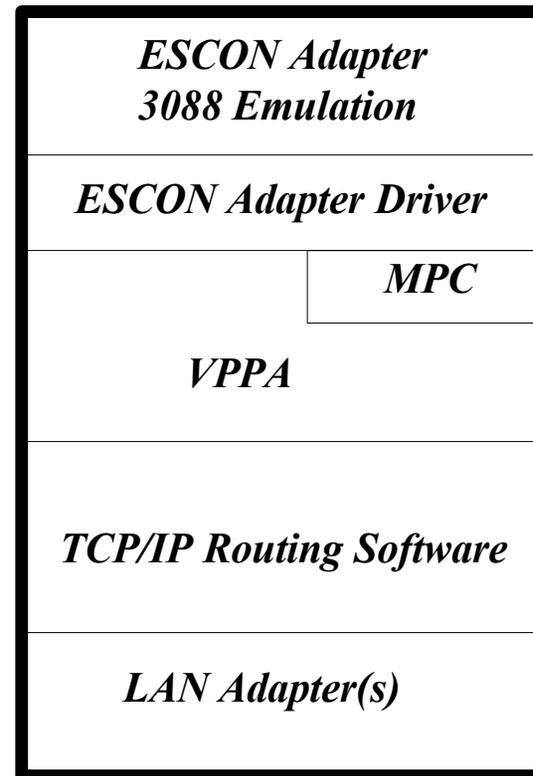

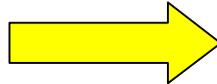

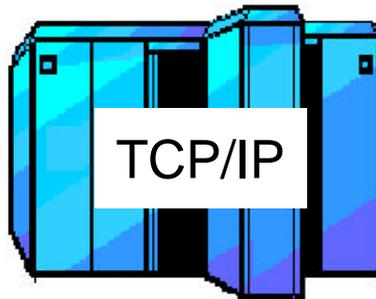

DB2 Universal Database

ADSTAR Distributed Storage Manager

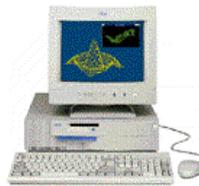

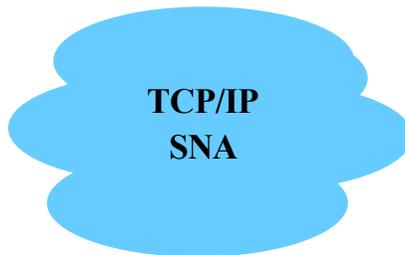

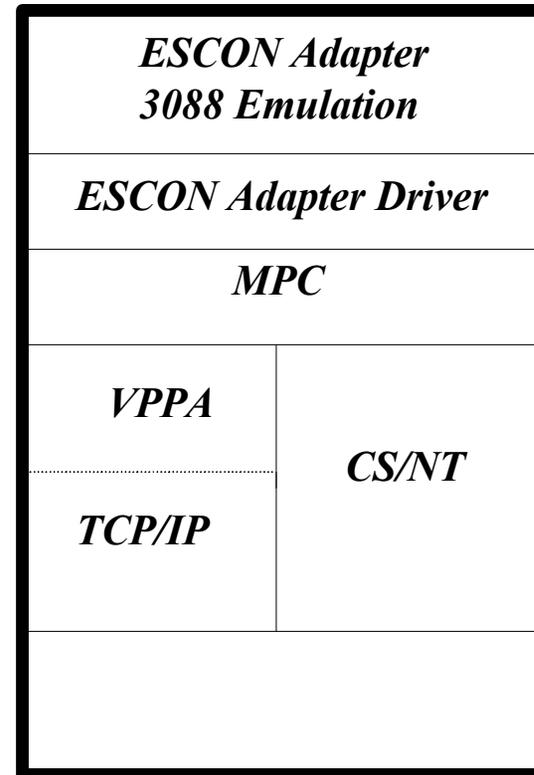

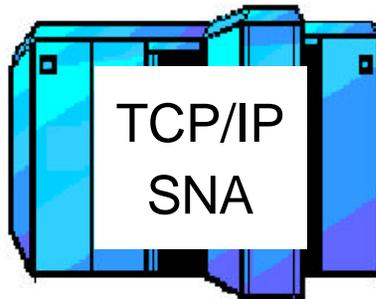

Future Directions

Networked VPPA

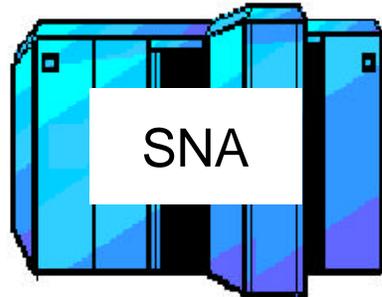

Enhanced MPC

- **SNA Network Support**
- **Enhanced TCP/IP Support (DCE, NFS, etc.)**

Comm. Server for Unixware

SNA, APPN,
TCP/IP

**Communications Server
for
Unixware 7**
